

### ALLDUCKS 6203

The 2 buttons of the remote control ALLDUCKS 6203 are OFF and ON.

In factory coding the remote control 6203 can open a gate DUCATI with the button OFF (channel T1) and a garage DUCATI with the button ON (channel T2)

Press at the same time the buttons OFF and ON. The light of the remote control blinks then comes off and finally remains on.

By releasing the buttons the light will come off. Now the remote control is in learning mode.

1. Press the button "OFF" or "ON" depending on which button you want to program first. Wait until the signal lamp flashes then release the button.
2. Enter your coding by 12 impulsions on the buttons ON and OFF. After this the signal lamp will turn on according to the impulsions :
3. - Following your choice 10 impulsions ON and OFF (Make a note of your chosen coding to be able to program your next remote controls in the same way),
4. - Then 2 impulsions : In order to use a motorisation of a gate : 2 impulsions OFF In order to use a motorisation of a garage : 1 impulsion OFF then 1 impulsion ON
5. Afterwards you should validate your coding by operating a 13th impulsion on the button chosen at the beginning of the coding.
6. The signal lamp of the remote control is blinking quickly
