

SIMINOR 433 NLT2

Programming a remote control on a S200 engine before 2001:

- 1) Set the gate in position "Closed".
- 2) Open the cover that contains the electronic control unit.
- 3) Press the button for self-learning, the green light comes on.
- 4) Release the button, the green light starts flashing

Take your new remote control:

- 1) Press the button you chose to use for the full opening. The gate opens without slowing down. The green LED light turns off.
 - 2) Press one more time the same button, the green LED light flashes, the leaves close without slowing down, the LED goes out.
 - 3) On the new remote control, press the button you chose to use for the partial opening. The leaf covering (or master side) by opening up to the stop with deceleration at the end of opening.
 - 4) Press again the same key, the leaf closes with the end of closing slowdown.
 - 5) Repeat the procedure from point A to all new remotes.
 - 6) To stop the self-learning: switch off power for at least 10 seconds with the "Power" button.
- NB: if you do not press any button for more than 2 minutes, self-learning stops automatically.
