

CAME TOP4

1. Open the electronic rack of your installation.
Locate the bar of 10 mini switches on the radio chart.
The mini-switches from 1 to 10 are in position ON or OFF
(the position of these mini switches determines the specific code of your installation).
Observe the position of the 10 mini switches: ON or OFF.

Example of coding:

1°	2°	3°	4°	5°	6°	7°	8°	9°	10°
ON	ON	ON	ON	ON	OFF	OFF	OFF	OFF	OFF

2. Open your new remote control.
Locate the trigger guard with a plastic strip on the left. It is on only one pin ex factory.
Plug off the trigger guard and plug it into the 2 pins.
Your remote control is now in learning mode.

Code your remote control with

- the right key of your remote control which corresponds to the position ON of mini the switches.

- the left key which corresponds to the position OFF.

(For a remote control with 4 buttons, use only the 2 buttons up).

In our example, press 5 times the right key for the first 5 mini

switches in position ON, and 5 times the left key for the 5 mini switches in position OFF.

The 10° press causes a different sound and announces the end of the learning.

Put the trigger guard in its initial position, and make a test before closing again your remote control.
