GENIUS TE4433HG

Procedure for memory storing the remote control on the receiver:

1) On the receiver, press the pushbutton for the channel you wish to program: SW1 to program CH1 and SW2 to program CH2.
LED 1 or LED 2 will light on steady light to signal that the receiver is in learning mode.

2) Press on the remote control within 10 seconds and hold down the push-button you wish to memory-store for at least 1 second.

3) If storage was successful, the LED flashes twice.

4) After the first remote control has been programmed, the receiver stays in learning mode, with the LED lflashing on steady light.

5) To memory-store successive remote controls (up to a maximum of 256), repeat the operations from point 2.

6) When 10 seconds have elapsed from memory-storage of the last remote control, the receiver automatically exits the learning stage.

You can exit the learning procedure manually; by pressing one of the push-buttons on the receiver (SW1 or SW2) after the remote
control has been stored.
