

Nice HSTXS1

01. Place the universal transmitter inside the detector from which you want to pick up the alarm information, sabotage, etc
02. Connect the universal transmitter to the detector as shown below
03. Set up the control unit to perform the HSTXS1 learning function (see the control unit's instruction manual).
04. Place the battery in the transmitter. With this operation the control unit automatically detects the new device; 1 beep from the control unit will confirm the acquisition (4 beeps mean that the device is already programmed).
05. Test correct operation by simulating alarms
